📁 EXECUTIVE SUMMARY

I am a professional operating at the intersection of strategic project management and technical leadership. I have a solid track record working as both a Project Manager and a Tech Lead, which allows me not only to organize workflow but also to engage in deep discussions with engineering teams. My work is heavily grounded in established frameworks, backed by key certifications such as PMP, SPC (SAFe), and KMP (Kanban). This grants me the flexibility to assess a client's or company's landscape and apply the most effective methodology — whether agile, traditional, or hybrid — to deliver optimal business results, always with a sharp focus on efficiency and continuous improvement. What sets me apart is my hands-on familiarity with modern technology. I have a strong affinity and experience with data, working with cloud architectures (AWS and GCP) and initiatives involving Data Science, Artificial Intelligence, and Python-driven automation. I truly understand the team's technical challenges because I speak their language. Currently, I am seeking an opportunity where I can add value by combining this business acumen, project governance, and technical team leadership, preferably in environments dealing with complex data or AI-driven challenges.
