

Your Full Name

TRANSFORMATION MANAGER & SENIOR AGILE COACH

2022 - Present

1. AGILE TRANSFORMATION & ORGANIZATIONAL EVOLUTION

CASE #1

ENTERPRISE AGILE SCALING & STRATEGIC PORTFOLIO ALIGNMENT

Accenture Brasil

CONTEXTO (DESAFIO)

Corporate agile transformation for a major player in the financial sector seeking to decentralize its structures and connect executive strategy to engineering delivery.

SITUAÇÃO

Executive leadership faced a lack of visibility into the return on technology investments, alongside a chronic misalignment between business goals and squad delivery capacity.

TAREFA

Design and implement the agile operating model at scale (SAFe/Lean Portfolio Management), restructuring the value streams of more than 40 teams.

AÇÃO

I led the organizational design of new product-based tribes, implemented integrated OKR cycles, and established Lean Portfolio Management (LPM) governance for Capex/Opex prioritization.

RESULTADO

Achieved strategic alignment of 100% of technology initiatives with business goals and reduced the time required for decision-making on new investments by 35%.

MÉTRICAS DE NEGÓCIO

35% reduction in the budget approval cycle

25% increase in portfolio delivery predictability

ARQUITETURA TÉCNICA

Jira Align

Confluence

Miro Enterprise

GOVERNANÇA

Lean Portfolio Management (LPM)

Corporate OKR Framework

SAFe Governance Model

CASE #2**GLOBAL AGILE OPERATING MODEL LOCAL ROLLOUT**

Accenture Brasil

CONTEXTO (DESAFIO)

Adaptation and implementation of a global operating model for the Latin American division of a multinational consumer goods company.

SITUAÇÃO

The model designed by the global headquarters failed to engage local leadership due to market cultural differences, generating friction and low practice adoption.

AÇÃO

I facilitated co-creation workshops with regional directors, introduced flexibility into governance roles, and guided a phased transition with short feedback cycles.

TAREFA

Customize the global corporate framework while maintaining regulatory compliance, ensuring adherence and engagement from teams in Brazil.

RESULTADO

The adoption of the new model jumped from 15% to 92% in the region within 6 months, surpassing the corporation's European benchmark.

MÉTRICAS DE NEGÓCIO

92% adoption rate of the local operating model

40% increase in regional decision-making agility

ARQUITETURA TÉCNICA

Microsoft Teams Rooms

Azure DevOps Boards

SharePoint Enterprise

GOVERNANÇA

Global-to-Local Framework Compliance

Change Management ADKAR Model

Regional Executive Steering Council

CONTEXTO (DESAFIO)

Agile maturity acceleration initiative for one of the largest telecommunications companies in the country.

SITUAÇÃO

Teams claimed to run agile methodologies but operated in functional silos with merely proforma rituals (Water-Scrum-Fall).

TAREFA

Structure a robust change management strategy based on the ADKAR model to elevate the actual level of agile maturity across engineering departments.

AÇÃO

I designed a gamified maturity matrix, trained over 200 Agile Coaches, and established an internal community of practice focused on removing organizational dependencies.

RESULTADO

Proven evolution of 65% of the squads from basic to advanced self-management levels, resulting in a drop in production environment incidents.

MÉTRICAS DE NEGÓCIO

65% of squads reached advanced maturity

30% reduction in post-deployment rework

ARQUITETURA TÉCNICA

Custom Agile Assessment Systems

Jira Software Dashboards

PowerBI Governance Portal

GOVERNANÇA

ADKAR Change Management Framework

Quarterly Maturity Audits

Community of Practice (CoP) Alignment

CASE #4**EXECUTIVE COACHING & CULTURAL LEADERSHIP ALIGNMENT**

Accenture Brasil

CONTEXTO (DESAFIO)

Program focused on cultural alignment and agile adoption for the C-Suite and directors of a large insurance company undergoing a digital transition.

SITUAÇÃO

Senior leadership continued to demand projects via fixed-scope and traditional macro schedules, suffocating the operational agility of frontline teams.

TAREFA

Conduct a consultative Executive Coaching process focused on the agile mindset, outcomes-based governance, and servant leadership.

AÇÃO

I directly supported directors and superintendents in exclusive sessions, shifting the status-report agenda toward reviews focused on delivered value and OKRs.

RESULTADO

Full adoption of flexible, capacity-based budgeting by corporate finance and a C-Suite fully aligned with the iterative mindset.

MÉTRICAS DE NEGÓCIO

100% of senior directors trained in the model

Migration of 80% of the budget to a capacity-based model

ARQUITETURA TÉCNICA

Miro Board Executive Layouts

Strategic OKR Dashboards

GOVERNANÇA

Executive Leadership Coaching Protocol

Strategic Alignment Meetings (SAM)

Lean Budgeting Governance

CONTEXTO (DESAFIO)

Restructuring and mapping the value streams of a large retailer focused on accelerating the digital ecosystem.

SITUAÇÃO

There were multiple delivery frictions within the e-commerce checkout journey due to teams organized by technology silos rather than customer journeys.

TAREFA

Reorder operational structures and value streams to focus on the end product and the digital user experience.

AÇÃO

I facilitated massive Value Stream Mapping (VSM) sessions, removing silos by unifying frontend/backend teams into the same operational tribes.

RESULTADO

Increased the frequency of releasing new features into production from monthly to bi-weekly without losing software quality.

MÉTRICAS DE NEGÓCIO

100% increase in core deployment frequency

20% acceleration in trackable digital gross revenue driven by new features

ARQUITETURA TÉCNICA

Lucidchart Enterprise

Jira Software

Confluence Documentation Hub

GOVERNANÇA

Value Stream Management (VSM)

Cross-Tribes Alignment Governance

Product-Led Operating Principles

2. OPERATIONAL EFFICIENCY, VALUE FLOW & DELIVERY

CASE #6 VALUE STREAM OPTIMIZATION & PROJECT RECOVERY (TURNAROUND)

Accenture Brasil

CONTEXTO (DESAFIO)

Recovery of a critical software delivery operation that suffered from a severe relationship crisis with the client and major schedule delays.

SITUAÇÃO

A large-scale delivery was 6 months behind schedule, suffering from high rework rates and a severe decline in service level agreements (SLAs) with the end client.

TAREFA

Assume crisis management as Transformation Manager to stabilize the value stream, eradicate efficiency bottlenecks, and renegotiate service level agreements.

AÇÃO

I applied Lean Thinking practices for Value Stream Mapping (VSM), introduced flow metrics (Lead Time, Cycle Time, Throughput), and led crisis management and consultative alignment sessions with complex stakeholders.

RESULTADO

Achieved a 45% reduction in delivery Lead Time, complete stabilization of contractual SLAs within 60 days, and restored client trust in the strategic partnership.

MÉTRICAS DE NEGÓCIO

45% reduction in Lead Time

Recovery and renewal of a multi-million dollar contract

Reduced team turnover from 18% to zero

ARQUITETURA TÉCNICA

Jira Software Dashboards

PowerBI for Lean Telemetry

Value Stream Mapping Tools

GOVERNANÇA

Daily Crisis Management Protocols

Flow Metrics Governance

Service Level Agreements (SLAs) Compliance

CASE #7**LEAN WASTE ELIMINATION IN FINTECH DELIVERY PIPELINE**

Accenture Brasil

CONTEXTO (DESAFIO)

Process engineering project focused on removing operational waste in the regulatory approval pipeline for credit products.

SITUAÇÃO

The approval time for new credit flows was delayed due to an excess of manual approvals and redundant rituals that crippled the flow.

TAREFA

Optimize the flow by eliminating operational waste related to waiting and over-processing through Lean Thinking principles.

AÇÃO

I conducted Flow Efficiency analyses, eliminated unnecessary handoffs between risk and development teams, and unified approval policies.

RESULTADO

Aggregate flow efficiency jumped from a scarce 12% to a healthy 48%, generating a significantly higher throughput of releases.

MÉTRICAS DE NEGÓCIO

Flow Efficiency raised from 12% to 48%

Time-to-market reduced by 3 weeks per cycle

ARQUITETURA TÉCNICA

Kanbanize / Businessmap

Azure DevOps Dashboard Integrated Extension

GOVERNANÇA

Lean Kanban Governance

Continuous Improvement Review (Kaizen)

Risk Policy Dynamic Integration

CASE #8**ENTERPRISE DELIVERY TELEMETRY & METRICS STANDARDIZATION**

Accenture Brasil

CONTEXTO (DESAFIO)

Standardization of operational indicators and analytical dashboards to monitor performance across a large outsourced operation.

SITUAÇÃO

Each department generated metrics in isolated spreadsheets, preventing senior management from having a reliable, unified, and auditable view of real productivity.

TAREFA

Design and deploy a unified global delivery telemetry model focused on data reliability.

AÇÃO

I standardized data collection taxonomy within systems (Jira/Azure DevOps), created real-time dashboards in PowerBI, and integrated this analytical routine into monthly business reviews.

RESULTADO

Unified 100% of indicators under a single source of truth, enabling preventive decisions before violating contractual deadlines.

MÉTRICAS DE NEGÓCIO

30% reduction in schedule estimation deviations

100% operational transparency achieved at the executive level

ARQUITETURA TÉCNICA

Jira API Data Extraction

PowerBI Architecture Analytics

SQL Server Warehouse Data Storage

GOVERNANÇA

Metrics Review Governance Model

Data Quality Taxonomy Enforcement

Monthly Business Reviews (MBR)

CASE #9**SQUAD CAPACITY MANAGEMENT & COST-PER-STORY POINT OPTIMIZATION**

Accenture Brasil

CONTEXTO (DESAFIO)

Delivery cost efficiency management for large agile development centers.

SITUAÇÃO

The development cost per story point or feature was rising above inflation due to hidden idleness and an excess of unfocused meetings.

TAREFA

Analyze the actual operational capacity of the teams, restructure unnecessary operational rituals, and optimize contractual costs.

AÇÃO

I instituted strict policies for efficient meetings, reviewed the technical sizing of squads to reallocate senior engineers, and created optimized working agreements.

RESULTADO

Achieved a net 15% reduction in the unit cost of delivered features while maintaining the same Definition of Done (DoD) and quality criteria.

MÉTRICAS DE NEGÓCIO

15% reduction in development cost per feature

Improved planned-versus-actual delivery rate to 95%

ARQUITETURA TÉCNICA

Tempo Timesheets Suite

Jira Capacity Management Plugins

GOVERNANÇA

Capacity Allocation Audit

FinOps Core Integration (Delivery)

Definition of Done (DoD) Quality Compliance

Accenture Brasil

CONTEXTO (DESAFIO)

Operational crisis management during the critical migration and decommissioning of a legacy physical datacenter.

SITUAÇÃO

The migration failed due to hidden technical dependencies between systems, paralyzing essential banking services for several hours.

TAREFA

Lead the crisis room by focusing on agile coordination between infrastructure, security, and software engineering to restore operational flow.

AÇÃO

I created a temporary Swarming Agile structure, broke traditional chains of command for fast technical decision-making, and managed continuous communication with senior stakeholders.

RESULTADO

Systems were fully restored in record time post-intervention, and a resilient contingency plan was adopted for subsequent cycles.

MÉTRICAS DE NEGÓCIO

Mitigation of multi-million dollar regulatory contractual fines

60% reduction in Mean Time to Resolution (MTTR) for critical incidents

ARQUITETURA TÉCNICA

Hybrid Data Center Network Architecture

PagerDuty

Splunk Observability Platform

GOVERNANÇA

Critical Incident Agile Command Protocol

Continuous Communications Steering

3. BUSINESS AGILITY, FINOPS & CONSULTING

CASE #11

LEAN BUDGETING & CAPEX-TO-OPEX FINANCIAL TRANSITION

Accenture Brasil

CONTEXTO (DESAFIO)

Redesign of traditional financial allocation processes for technology budgets in a major national bank.

SITUAÇÃO

The rigid annual Capex model prevented the bank from responding to innovations from agile competitors, as scope changes required lengthy committee approvals.

TAREFA

Migrate the rigid project-funding system toward agile financing tied to stable value streams (Lean Budgeting).

AÇÃO

I worked alongside the CFO to design financial autonomy thresholds for the tribes and established quarterly participatory portfolio reviews.

RESULTADO

Drastically reduced the investment release cycle from 4 months to just 2 weeks through continuous financial realignment.

MÉTRICAS DE NEGÓCIO

87% reduction in funding approval times for new ideas

Efficient capital allocation, reducing waste on discontinued initiatives by 20%

ARQUITETURA TÉCNICA

SAP FI/CO Module Integration

Targetprocess Portfolio Platform

Excel Advanced Financial Automation Models

GOVERNANÇA

Lean Budgeting Framework

Quarterly Participatory Funding Reviews

Guardrails for Value Stream Spending

CASE #12**CLOUD FINOPS IMPLEMENTATION & CLOUD WASTE CONTROL**

Accenture Brasil

CONTEXTO (DESAFIO)

Financial governance of large-scale cloud infrastructure consumption for an integrated payment processing platform.

SITUAÇÃO

With squads given autonomy to provision cloud resources, the AWS/Azure bill skyrocketed unpredictably, exhausting the corporate annual budget in less than 8 months.

TAREFA

Implement FinOps culture and governance, bridging agile teams, infrastructure, and finance.

AÇÃO

I introduced cost dashboards directly into squad planning rituals, instituted a compulsory tagging policy, and set per-product infrastructure cost efficiency goals.

RESULTADO

Saved R\$ 4.2 million in unnecessary cloud spend over 10 months without degrading system performance or stability.

MÉTRICAS DE NEGÓCIO

R\$ 4.2 million saved in cloud infrastructure spending

100% monthly budget predictability achieved

ARQUITETURA TÉCNICA

GOVERNANÇA

FinOps Operating Model (Inform, Optimize, Operate)

Cloud Tagging Policy Enforcement

Squad-Level Cost Accountability Reviews

Accenture Brasil

CONTEXTO (DESAFIO)

Governance realignment and mediation in a complex multi-business and multi-vendor ecosystem for a large energy distributor.

SITUAÇÃO

Constant contractual disputes and a lack of practical collaboration between Accenture, the client, and third-party vendors caused operational paralysis.

TAREFA

Establish a shared governance ecosystem focused on mutual wins and common business objectives (Win-Win Architecture).

AÇÃO

I designed a unified engineering committee and standardized contracts under agile models with performance incentives tied to end-to-end commercial value delivery.

RESULTADO

Completely eliminated daily governance friction and achieved a 30% increase in the velocity of the consolidated vendor pipeline.

MÉTRICAS DE NEGÓCIO

Zero governance conflicts at the director level

30% increase in delivery velocity across joint initiatives

ARQUITETURA TÉCNICA

Cross-Company Slack Connect Channels

Unified Jira Enterprise System Integration

GOVERNANÇA

Multi-Vendor Ecosystem Governance

Performance-Based Shared Incentives Model

Executive Mediation Framework

PRODUCT

Accenture Brasil

| CONTEXTO (DESAFIO)

Consultative initiative focused on the rapid design and conception of a new digital insurance product.

| SITUAÇÃO

Aggressive competition from insurtechs required the traditional insurer to launch a product in under 90 days, but traditional processes estimated a minimum of 1 year.

| TAREFA

Coordinate a cross-functional corporate agile strategy (Business, Support, Legal, Marketing, and IT) under acceleration methodologies.

| AÇÃO

I ran Lean Inception tracks, implemented weekly legal validation cycles to reduce internal bureaucratic documentation, and shielded the technical team.

| RESULTADO

The product launched successfully in just 78 days, capturing temporary leadership in the market segment.

MÉTRICAS DE NEGÓCIO

Launched in 78 days (75% reduction vs. traditional estimation)

Over 50,000 new policies issued in the first month post-launch

4. MODERN ENGINEERING & PLATFORM AGILITY

CASE #15

PLATFORM ENGINEERING CULTURE & DEVELOPER VELOCITY ACCELERATION

Accenture Brasil

CONTEXTO (DESAFIO)

Cultural and technical modernization to accelerate developer productivity through the adoption of Internal Developer Platforms (IDP).

SITUAÇÃO

Development teams wasted weeks configuring basic infrastructure and permissions, creating high cognitive friction and driving down Developer Velocity.

TAREFA

Foster a culture of technical agility and support the governance of adopting internal platforms (Golden Paths) focused on team autonomy.

AÇÃO

I established agile governance for the Platform Engineering team, drove cultural change management, and implemented the SPACE framework and DORA metrics to monitor efficiency gains.

RESULTADO

Reduced the setup time for new applications from 3 weeks to under 30 minutes, drastically accelerating developer velocity.

MÉTRICAS DE NEGÓCIO

40% increase in the Developer Velocity Index (DVI)

50% improvement in the DORA Deployment Frequency metric

ARQUITETURA TÉCNICA

Internal Developer Platforms (IDP)

DevOps / GitOps Core Frameworks

DORA Metrics Dashboards

GOVERNANÇA

SPACE Framework for Developer Productivity

InnerSource Governance

Platform-as-a-Product Operating Model

CONTEXTO (DESAFIO)

DevOps scaling strategy through the rollout of DORA indicators across more than 150 concurrent squads.

SITUAÇÃO

Senior engineering invested in CI/CD automation but lacked visibility into the actual impact of these tools on ecosystem stability and deployment velocity.

TAREFA

Design the governance architecture and automated continuous collection of the four essential DORA metrics directly within automation pipelines.

AÇÃO

I led the specification of the analytical measurement pipelines and attached technical mentoring plans for squads diagnosed with low delivery performance.

RESULTADO

Reduced the global corporate MTTR for production failures by 42% and achieved a consistent increase in safe software release frequency.

MÉTRICAS DE NEGÓCIO

42% reduction in Mean Time to Restore (MTTR)

Stabilized Change Failure Rate below 5%

ARQUITETURA TÉCNICA

GitHub Enterprise Metrics API

ArgoCD Continuous Delivery Tracker

Grafana Analytics Engine

GOVERNANÇA

DORA Quality Standards Governance

Automated Engineering Compliance Checking

Continuous Improvement Technical Guilds

CONTEXTO (DESAFIO)

Transformation in internal technical architecture collaboration by adopting open-source inspired practices.

SITUAÇÃO

Shared corporate security software components were maintained by a single isolated team, creating massive dependency bottlenecks for the entire company.

TAREFA

Break the repository monopoly through a scaled, collaborative internal development governance model (InnerSource).

AÇÃO

I defined strict open code-review rules (Trusted Reviewers), created onboarding channels, and guided the cultural shift for developers to accept secure external contributions.

RESULTADO

Over 150 external contributions were accepted into the security core within 6 months, completely mitigating the internal dependency bottleneck.

MÉTRICAS DE NEGÓCIO

Eliminated 90% of the waiting time for core library changes

Increased internal technical engagement across the engineering team

ARQUITETURA TÉCNICA

GitHub Enterprise Repository Framework

SonarQube Quality Gates Automation

Automated Linters and Testing Suites

GOVERNANÇA

InnerSource Governance Board

Trusted Reviewer Quality Verification Model

Open Code Collaboration Compliance Rules

CONTEXTO (DESAFIO)

Structured architecture transformation campaign aimed at remediating massive technical debt accumulated in highly critical legacy systems.

SITUAÇÃO

A massive volume of bugs and high cyclomatic complexity in legacy code stifled agility, preventing the stable delivery of regulatory demands.

AÇÃO

I negotiated a recurring 20% sprint capacity allocation for technical-functional architecture refactoring and automated the blocking of low-quality code.

TAREFA

Institute permanent governance for allocating engineering effort dedicated to internal code quality without interrupting business flow.

RESULTADO

Improved the core software maintainability rating from level D to level A in SonarQube over 12 months.

MÉTRICAS DE NEGÓCIO

60% reduction in the volume of bugs reported in production

Elevated squad technical writing efficiency and velocity

ARQUITETURA TÉCNICA

SonarQube Cloud Integration

Java Legacy Code Replatforming Frameworks

JUnit Automated Test Architectures

GOVERNANÇA

Technical Debt Capital Guardrails

Sprint Quality Gate Automated Enforcement

Continuous Code Refactoring Policies

CONTEXTO (DESAFIO)

Acceleration of information security and compliance pillars, integrating them directly into agile operational rituals.

SITUAÇÃO

Detailed application security reviews occurred only at the end of traditional project cycles, resulting in the cancellation or emergency refactoring of dozens of deployments.

TAREFA

Shift information security validation to the beginning of the technical agility cycle (Shift-Left Security).

AÇÃO

I supported the inclusion of automated security scanners (SAST/DAST) directly into CI/CD development pipelines and trained Security Champions within the agile squads.

RESULTADO

Critical vulnerabilities mitigated before reaching production jumped from 20% to 98% via the automated preventive model.

MÉTRICAS DE NEGÓCIO

98% of vulnerabilities captured at the pre-production stage

Zero deployments blocked at the last minute by surprise audits

5. DATA-DRIVEN AGILITY & DATA MESH OPERATING MODELS

CASE #20 DATA MESH OPERATING MODEL BLUEPRINT & DATAOPS FLOW OPTIMIZATION

Accenture Brasil

CONTEXTO (DESAFIO)

Transition from a monolithic, centralized data model to a decentralized architecture oriented around business domains.

SITUAÇÃO

The central data team created an immense operational bottleneck for the company, delaying analytical reporting and business intelligence for months.

AÇÃO

I designed new structures and roles (such as Data Product Owners), supported the definition of the Data Product lifecycle, and deployed agile processes under DataOps to automate delivery pipelines.

TAREFA

Design the operating model to enable a Data Mesh approach, decentralizing data engineering and empowering business domains.

RESULTADO

Decentralized 12 business domains to act with full autonomy, reducing the time-to-market for new analytical insights from 60 days to 5 days.

MÉTRICAS DE NEGÓCIO

90% reduction in time-to-market for new data products

Over 80% internal satisfaction among data consumers

ARQUITETURA TÉCNICA

Data Mesh Architecture Principles

Data Lakehouse

Modern Data Stack Tools

GOVERNANÇA

Decentralized Data Governance

Data Product Lifecycle Management

DataOps Quality Assurance Framework

CONTEXTO (DESAFIO)

Corporate program focused on enabling traditional product managers to take on analytical disciplines.

SITUAÇÃO

The client possessed large volumes of well-structured raw data in their cloud, but departments did not know how to monetize or translate this information into off-the-shelf digital data products.

TAREFA

Model the institutional role, create analytical training tracks (Data Literacy), and standardize the evolutionary lifecycle of data products.

AÇÃO

I developed Data Product Canvas frameworks, led executive mentoring focused on defining commercial analytical value, and structured cross-team agile governance.

RESULTADO

Accelerated and launched 8 new analytical products focused on predictive intelligence, driving new streams of direct revenue.

MÉTRICAS DE NEGÓCIO

8 new commercial analytical data products successfully launched

45% increase in the internal corporate Data Literacy index

ARQUITETURA TÉCNICA

Alation Data Catalog Platform

Snowflake Sharing Architecture

Miro Product Data Discovery Canvas

GOVERNANÇA

Data Product Lifecycle Framework

Analytical Domain Accountability Rules

Data Value Realization Tracking

CONTEXTO (DESAFIO)

Implementation of DataOps as an agile operational discipline focused on the resilience and stability of large analytical flows.

SITUAÇÃO

Critical data pipelines failed overnight due to schema inconsistencies, directly impacting morning regulatory reports for senior management.

TAREFA

Design agile governance and robust automations by applying modern monitoring and continuous preventive testing methodologies to data pipelines.

AÇÃO

I instituted technical retrospective rituals exclusive to data, supported dbt adoption for clear data lineage, and helped automate preventive alerts for data volume anomalies.

RESULTADO

Achieved complete stabilization of daily analytical pipelines, reducing unexpected breakages in critical production environments from 22% to less than 1%.

MÉTRICAS DE NEGÓCIO

Reduced critical nightly pipeline failure rates from 22% to <1%

Guaranteed 99.9% SLA availability for morning reports

ARQUITETURA TÉCNICA

dbt (data build tool)

Apache Airflow Orchestration

Great Expectations Validation Framework

GOVERNANÇA

DataOps Quality Assurance Policy

Data Lineage Integrity Governance

Automated Schema Drift Enforcement

CONTEXTO (DESAFIO)

Complete overhaul of the bureaucratic constraints imposed by traditional centralized data security and governance committees.

SITUAÇÃO

Manual approval for data scientists to access strategic analytical databases took an average of 45 days due to legacy ticket-based flows and physical committees.

TAREFA

Create an agile Federated Data Governance model that provides operational speed while preserving strict compliance with data protection laws (LGPD).

AÇÃO

I designed decentralized, cross-functional agile committees structured as local data compliance cells operating with transparent, automatable policies.

RESULTADO

Average turnaround time for granting audited access plummeted from 45 days to just a few hours through automated, domain-profile-based rules.

MÉTRICAS DE NEGÓCIO

Drastic reduction in the analytical operational onboarding cycle

100% compliance achieved in external LGPD audits

ARQUITETURA TÉCNICA

Collibra Governance Portal

AWS IAM Identity Center Integration

Automated Access Auditing Protocols

Accenture Brasil

CONTEXTO (DESAFIO)

Agile transformation of internal operational data focused on robust monitoring for ecosystem technical stability.

SITUAÇÃO

SRE and engineering teams operated reactively to tickets, lacking a unified historical data model correlating technical failures to actual business conversion impacts on user journeys.

TAREFA

Lead an agile data monitoring squad to build an integrated real-time analytical management ecosystem.

AÇÃO

I managed the analytical mapping of collected observability data, connecting it to commercial funnels, and supported integrated SRE-Business data reviews.

RESULTADO

Generated predictive visibility into revenue losses caused by technical instabilities, elevating the operational proactivity of the teams.

MÉTRICAS DE NEGÓCIO

Early mitigation of operational financial losses from incidents

Increased focus on product quality through analytical data correlation

6. AI GOVERNANCE, MLOPS & GENERATIVE AI TRANSFORMATION

CASE #25

GENERATIVE AI AGILE FRAMEWORK ADOPTION & MLOPS GOVERNANCE

Accenture Brasil

CONTEXTO (DESAFIO)

Pioneering implementation of large-scale agile governance for Generative AI and LLM initiatives under technical compliance.

SITUAÇÃO

The company raced to adopt LLM and GenAI solutions but faced a lack of adequate agile frameworks to manage the experimental nature and compliance risks of these technologies.

AÇÃO

I developed an iterative agile framework focused on the MLOps pipeline, established agile rituals centered on statistical model maturity, and promoted AI literacy initiatives for leadership.

TAREFA

Create a customized agile framework for AI projects that balanced fast experimentation (R&D/MVPs) with strict monitoring and security.

RESULTADO

Reduced the approval time for AI solutions by 50% using regulated blueprints and successfully deployed AI assistants that increased engineering team productivity.

MÉTRICAS DE NEGÓCIO

50% acceleration in the AI approval roadmap

Measured productivity gains through GenAI coding assistants

ARQUITETURA TÉCNICA

Statistical Model Monitoring Dashboards

GOVERNANÇA

Responsible AI (RAI) Principles

MLOps Statistical Risk Governance

AI Experimentation & R&D Agile Framework

CONTEXTO (DESAFIO)

Practical deployment of ethical guidelines and operational governance for Artificial Intelligence to detect bias in predictive HR models.

SITUAÇÃO

Internal AI models used for screening resumes showed statistical indicators of unconscious gender bias, creating serious corporate ethical risks.

TAREFA

Design and implement agile audit committees and automated tools integrated into the MLOps pipeline to guarantee Responsible AI.

AÇÃO

I introduced formal ethical verification steps into the Definition of Ready (DoR) for models and supported the adoption of open-source statistical interpretability libraries.

RESULTADO

Achieved proven eradication of biases in corporate screening algorithms, raising diversity across hiring processes.

MÉTRICAS DE NEGÓCIO

Zero corporate reputational or legal litigation risks

Measured increase in hiring equity across internal departments

ARQUITETURA TÉCNICA

Fairlearn Python Bias Library

SHAP (SHapley Additive exPlanations) Tools

CONTEXTO (DESAFIO)

Acceleration of the engineering portfolio focused on the massive launch of cognitive intelligent agents for a large logistics company.

SITUAÇÃO

Primary call deflection by traditional virtual attendants was low (20%), driving up costs and overworking the human call center team.

TAREFA

Coordinate cross-functional agile AI teams to refactor the cognitive engine, adopting LLMs under a fast validation regime.

AÇÃO

I led agile prompt-refinement dynamics based on user pain points and designed agile metrics focused on analytical accuracy.

RESULTADO

The automated call retention rate jumped from 20% to an impressive 74% within less than 4 months of continuous operation.

MÉTRICAS DE NEGÓCIO

Elevated automated call retention from 20% to 74%

Immediate 35% reduction in human call center costs

7. PRODUCT OPERATIONS SPECIALIST

CASE #1 PRODUCT TELEMETRY & ANALYTICAL DASHBOARDS DEPLOYMENT

Accenture Brasil

CONTEXTO (DESAFIO)

Implementation of a structured Product Operations discipline focused on providing precise user behavior data for product decision-making.

SITUAÇÃO

Product Managers made scope evolution decisions based purely on intuition (HiPPPO effect) due to a lack of clear behavior metrics within the application.

TAREFA

Design the analytical telemetry architecture for user journeys and train product teams in Product Analytics rituals.

AÇÃO

I mapped key events across if critical journeys, integrated advanced user-tracking tools, and created standardized analytical dashboards embedded into squad routines.

RESULTADO

Shifted the adoption of data-informed product decisions to 100% across tribes focused on the digital app.

MÉTRICAS DE NEGÓCIO

22% increase in conversion across the monitored digital funnel

Eliminated intuition-based decision-making in steering committees

ARQUITETURA TÉCNICA

Amplitude Product Analytics Platform

CASE #2**DUAL-TRACK AGILE IMPLEMENTATION FOR HEALTHTECH PLATFORM**

Accenture Brasil

CONTEXTO (DESAFIO)

Methodological restructuring of feature conception and delivery cycles within a complex digital medical ecosystem.

SITUAÇÃO

Squads built complete features at a high technical cost only to have them rejected by the market due to a lack of validation in earlier phases.

AÇÃO

I trained teams in rapid user research, established systematic low-fidelity prototyping, and aligned operational refinements.

TAREFA

Deploy the Dual-Track Agile operating model with discipline, structurally connecting fast Discovery and fast Delivery tracks.

RESULTADO

Drastically reduced the post-development feature discarding rate from a staggering 40% to a mere 4% via pre-validation.

MÉTRICAS DE NEGÓCIO

Reduced software engineering waste from 40% to 4%

30% increase in Net Promoter Score (NPS) for the final product

ARQUITETURA TÉCNICA

Figma Enterprise Collaboration Hub

Maze Interactive Prototyping Research

Jira Product Discovery Tooling

GOVERNANÇA

Dual-Track Agile Integration Governance

Product Validation Exit Criteria Policy

Continuous Customer Discovery Framework

CASE #3**PRODUCT GOVERNANCE GOLDEN PATHS & ALIGNMENT AT SCALE**

Accenture Brasil

CONTEXTO (DESAFIO)

Standardization of methodologies and product playbooks (Golden Paths) for an organization of more than 80 Product Managers (PMs).

SITUAÇÃO

Rapid company expansion generated severe inconsistencies in story writing, scattered product visions, and a lack of standards in strategic documentation.

TAREFA

Structure the Product Operations area to build and document mandatory shared methodological golden paths and best-practice guides.

AÇÃO

I wrote reference playbooks in central knowledge bases, created unified Product Requirement Document (PRD) templates, and conducted continuous refinement clinics.

RESULTADO

Achieved immediate operational alignment, reducing the time spent by senior engineers clarifying ambiguous requirements by 35%.

MÉTRICAS DE NEGÓCIO

35% reduction in technical requirements refinement time

100% of new PMs onboarded and productive in half the conventional time

ARQUITETURA TÉCNICA

Confluence Central Knowledge Space

Notion Enterprise Repository Layouts

Productboard Strategic Alignment Tool

GOVERNANÇA

Product Management Golden Paths Policies

Unified PRD Compliance Review

Cross-Product Dependencies Management Alignment

CONTEXTO (DESAFIO)

Rationalization and unification of fragmented software ecosystems used for digital product management.

SITUAÇÃO

Different business units used redundant competing paid tools (Miro vs. Mural, Jira vs. Asana), creating information silos and driving up corporate licensing costs.

TAREFA

Lead a detailed technical inventory, define the standard corporate product tool stack, and negotiate bulk migrations.

AÇÃO

I conducted detailed tool-utilization assessments, ordered gradual platform decommissions, and led the large-scale migration of legacy knowledge bases.

RESULTADO

Achieved a direct recurring annual saving of over R\$ 1.8 million in productivity software licenses while unifying 100% of the ecosystem.

MÉTRICAS DE NEGÓCIO

R\$ 1.8 million in recurring annual financial savings

100% ecosystem unification under standard tools achieved
